NEWS RELEASE

Climate Earth Announces the Industry's First Complete Global Cement EPD Generator *Now live in France and designed to support any country*

Richmond, California, USA. Customer and investor expectations, and a commitment to slow climate change are driving cement manufacturers to rapidly innovate to reduce the carbon footprint of production. Efficiently measuring and reporting progress on these initiatives has become a strategic requirement.

Climate Earth today announces the release of the first complete and global-ready EPD Generator for cement.

Available now in France, the Cement EPD Generator builds on the foundation of Climate Earth's ready mix EPD generators which are currently deployed at over 400 locations in North America and have generated nearly 40,000 digital EPDs.

Unlike other tools that only address step two, Climate Earth's system instantly generates fully verified EPDs and automates every other part of the EPD creation process, except the initial one-time data collection process.

- Step 1: Data collection
- Step 2: EPD calculation
- Step 3: EPD generation
- Step 4: EPD verification
- Step 5: EPD publication

A global-ready solution, the Climate Earth Cement EPD generator is designed to adapt to the rapidly changing and complex world. This includes built-in support for multiple PCRs, country specific requirements, multiple life cycle inventory databases, multiple languages, unlimited scalability, and meets the high security demands of global producers. Even with these robust and flexible features, the Cement EPD Generator is easy to use, allowing manufacturers to quickly generate EPDs on demand and focus their efforts on cement carbon reduction.

"Designing a global product required significant extensions to our cloud-based software architecture." said Nicolas Parcerisa, Chief System Architect and VP of Engineering for Climate Earth. "Now that these base system architecture changes are complete, we can efficiently add new sophisticated capabilities as demand grows."

About Climate Earth

With nearly 40,000 ready mix and block EPDs generated, Climate Earth is the leading provider of cloud-based EPD solutions for the concrete industry. We create business friendly applications that help our customers grow and thrive in the low carbon construction market. Our application focus is on measuring and managing embodied carbon, speeding low carbon mix design and helping producers market their low carbon concrete solutions. Our products include: EPD Essential and EPD Advantage Ready Mix EPD Generators, the CMU EPD Generator, and now the cement generator. The Project Builder and the Concrete Designer round out our product suite by providing advanced marketing and EPD data analysis.
